
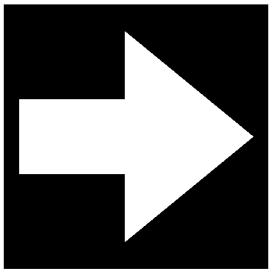
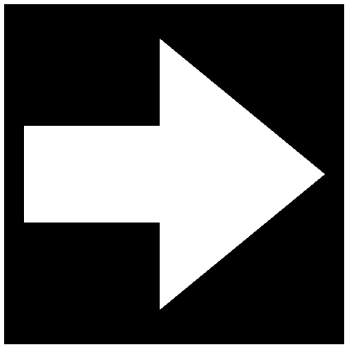
35 mm



35 mm spare



45 mm (if it fits)

WHITE ARROW on BLACK. Print this page, cut out the black square,
and tape it on the black roof. The arrow is the only bright thing.

The POINT is the car's front.

Why this works better than the printed arrow on white paper:
the white arrow is a separable bright blob, so the software finds
its centroid and principal axis instead of matching a template.
Measured: 15 of 16 rotations within 5 degrees, and perspective
(which broke the template approach at 0.78) does not matter.

Print 100%, normal quality, matte paper. Measure the 100 mm line.
