
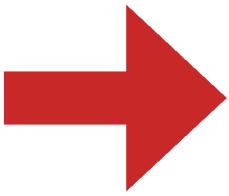
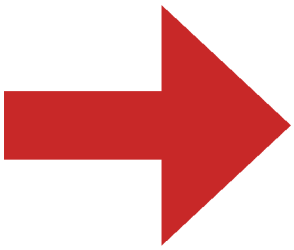
35 mm



35 mm spare



45 mm

RED ARROW on white paper. Simple: one triangular head, one thick tail.

The POINT is the car's front.

After taping it, annotate it with ./start.sh label <name>

  mode = ???????? (free polygon), name = arrow

  click around the WHOLE WHITE PAPER, not just the red arrow:

  the paper's edges give the matcher context that does not

  change when the car moves.

Then say so and the template is rebuilt from that annotation.
